multicertification ATEX, IECEx, Rostechnadzor

On/off valves equipped with explosion-proof solenoids available with following multicertifications:

Multicertifications for **solenoids group II** for surface plants with gas, vapours and dust environment

- ATEX 94/9/EC  
Ex II 2G Ex d IIC T6/T4 Gb  
Ex II 2D Ex tb IIIC T85°C/T135°C Db
- IECEx worldwide recognized certification  
Ex d IIC T6/T4 Gb  
Ex tb IIIC T85°C/T135°C Db
- Rostechnadzor Russian Certification  
Ex II 2G Exd IIC T6/T4

Multicertifications for **solenoids group I** for surface, tunnels or mining plants

- ATEX 94/9/EC: Ex I M2 Ex d I Mb
- IECEx: I M2 Ex d I Mb

The solenoid case is designed to contain the possible explosion which could be caused by the presence of the gas mixture inside the housing, thus avoiding dangerous propagation in the external environment. They are also designed to limit the external temperature according to the certified class to avoid the self ignition of the explosive mixture present in the environment.

**Cable gland PAMC/\* (IP66/67) for valves with multicertification Group II**

**PAMC/M**  
**PAMC/NPT**

M20x1.5  
OR  
1/2" NPT

**PAMC/GK**

1/2" GK

**Cable size 6,5 to 11,9 mm**  
 The cable glands PAMC, are Multicertified according to:  
 ATEX: EN 60079-0, EN 60079-1, EN 60079-7 and EN 60079-31  
 IECEx: IEC 60079-0, IEC 60079-1, IEC 60079-7 and IEC 60079-31  
 Rost: EN60079-0 and EN60079-1

Following codes have to be specified for spare cable glands:  
**PAMC/GK** = with threaded connection GK-1/2" ISO/UNI-6125 (tapered)  
**PAMC/NPT** = with threaded connection 1/2" NPT ANSI B2.1 (tapered)  
**PAMC/M** = with threaded connection M20x1,5 UNI-4535 (6H/6g).

**The cable must be suitable for the working temperature as specified in the "safety instructions" delivered with the first supply of the products.**  
 Additional equipotential grounding can be also performed by the user on the external facility provided on the solenoid case.  
 Minimum section of external ground wire = 4 mm<sup>2</sup>.  
 Minimum section of internal ground wire = the same of supply wire.

The cable glands must be blocked with loctite or similar or with a lock nut.  
 The valves must be connected to the power supply using the terminal board inside the solenoid.
